

TUNING YOUR GUITAR

There are electronic tuners, pitchpipes and tuning forks available at your local music store and some stores will tune your guitar for you. It is advisable to have your guitar tuned by an experienced musician the first time.

Never tune the strings too high above their designated pitch! A snapping string can be painful or damaging to the instrument.

You can also tune your guitar to a piano, another instrument, or if you know one string is up to pitch, you can tune the other strings from that string.

Tuning to a piano _____ or _____ **Fretted strings to open strings**

6 string fret 5 (A) same pitch as 5 string (A) open.
 5 string fret 5 (D) same pitch as 4 string (D) open.
 4 string fret 5 (G) same pitch as 3 string (G) open.
 3 string fret 4 (B) same pitch as 2 string (B) open.
 2 string fret 5 (E) same pitch as 1 string (E) open.

(an open string is a string which is not fretted.)
